CONTENTS

Table	LABOUR	Page
..	Scope, definitions and explanatory notes	3
1	Labour force survey: civilian population aged 15 years and over by employment status, February 1973 to August 1975	4
2	Elements of labour force at population censuses, 1954 to 1971.	5
3	Wage and salary earners in civilian employment - By government and private employment, June 1970 to June 1975	5,6
4	Industry groups and sub-groups, 1970-71 to 1974-75	7-9
5	Unemployed persons registered for employment with district offices of the Commonwealth Employment Service, June 1970 to June 1975	10
6	Job vacancies registered with district offices of the Commonwealth Employment Service, June 1970 to June 1975	11
7	Persons registered for employment with Commonwealth Employment Service, December 1970 to June 1975	12
8	Vacancies registered with Commonwealth Employment Service: occupational groups	12
<u>TRADE UNIONS, INCIDENCE OF AWARDS AND INDUSTRIAL DISPUTES</u>		
..	Scope, definitions and explanatory notes	13
9	Trade unions: number and membership, 1970 to 1974	14
10	Number and proportion of employees affected by type of award, etc., April 1954 to May 1974	14
11	Proportion of employees affected by awards, etc. by industries, May 1974	14
12	Industrial disputes - All industry groups, 1970 to June 1975	14
13	By industry groups, 1973 and 1974	15
14	Method of settlement of industrial disputes: all industry groups, 1970 to 1974	16
<u>WAGES AND HOURS</u>		
..	Scope, definitions and explanatory notes	17,18
15	Average weekly overtime and ordinary time earnings and hours paid for full-time employees (other than managerial, etc. staff) private and government - All industries, 1972 to 1974	19
16	By industries, 1972 to 1974	20
17	Average weekly earnings and hours paid for full-time employees (other than managerial, etc. staff) government: by industries, 1972 to 1974	21
18	Average hourly earnings, total (private and government) employment full-time and part-time employees (other than managerial, etc. staff): by industry, 1972 to 1974	22
19	Average weekly earnings, private employment, full-time managerial, executive, etc. staff: males, 1972 to 1974	22
20	Average weekly earnings per employed male unit - Original series, 1967-68 to 1974-75	23
21	Seasonally adjusted series, 1967-68 to 1974-75	23
22	Weighted average minimum weekly wage rates, Federal and State Awards: adult males, December 1939 to June 1975	23
23	Weighted average minimum weekly wage rates payable for a full week's work (excluding overtime) as prescribed in awards, determinations, etc.: adult males, June 1970 to June 1975	24
24	Weighted average minimum hourly wage rates payable: adult males, June 1970 to June 1975	25
25	Weighted average minimum weekly wage rates payable for a full week's work (excluding overtime) as prescribed in awards, determinations, etc.: adult females	26
26	Weighted average minimum hourly wage rates payable: adult females	27
27	State basic wage rates: Hobart	28
28	Federal total wage: increases in wage rates, 1967 to 1975	28
29	Minimum wage, adult males, weekly rates: Federal and Tasmanian awards, 1968 to 1975	28
30	Minimum rates of wage for a full week's work (excluding overtime) in selected industries and occupations, Hobart - Adult males, 1972 to 1974	29-31
31	Adult females, 1972 to 1974	32
<u>PRICES AND PRICE INDEXES</u>		
..	Scope, definitions and explanatory notes	33,34
32	Consumer price index - Group index numbers Hobart, 1954-55 to June 1975	35
33	Composition and weighting pattern at December 1973 for the six state capital cities combined	36
34	Average retail prices of selected food and grocery items, Hobart - Annual, 1965 to 1974	37
35	Monthly, March 1973 to June 1975	38
36	Wholesale price index of materials used in building other than house building group index numbers: Hobart, 1970-71 to June 1975	39
37	Wholesale price index of materials used in house building group index numbers: Hobart, 1970-71 to June 1975	40
38	Price index of metallic materials used in the manufacture of fabricated metal products group and all groups index numbers 1970-71 to June 1975	41
39	Price indexes of copper materials used in the manufacture of electrical equipment: index numbers for selected activities, 1970-71 to June 1975	41
40	Price index of materials used in manufacturing industry - Group index numbers based on industry of origin, 1970-71 to June 1975	42
41	Group index numbers based on standard international trade classification, 1970-71 to June 1975	43
42	Export price index: Australia, 1964-65 to June 1975	44
43	Indexes of unit gross value of agricultural production and output: Australia, 1963-64 to 1973-74	45

SYMBOLS AND USAGE

The following standard symbols are used in publications of the Tasmanian Office of the Bureau:

ASIC	Australian Standard Industrial Classification.	r	Revision to figure or series published in previous issue.
M	Males; F Females; P Persons.	..	Nil or less than half the unit shown, or not applicable.
n.a.	Not available.	—	Break in continuity of the series (where drawn across a column between two consecutive figures).
n.e.c.	Not elsewhere classified.		
n.e.i.	Not elsewhere included.	(H)	Located in Hobart Statistical Division;
n.p.	Not available for separate publication; included in totals where applicable.	(S)	Located in Southern Statistical Division;
p	Preliminary - figure or series subject to revision.	(H)(S)	Parts in both Divisions.

A blank space in a table indicates that the figure is not yet available.

Values are shown in Australian currency.

Any discrepancies between totals and sums of components in tables are due to rounding.

LABOUR

EMPLOYMENT AND UNEMPLOYMENT

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

Elements of Labour Force

In censuses of population prior to 1966, people were asked to classify themselves as employers, employees, unemployed, etc. From the 1966 Census, people were invited to describe their activity in a specific week and the Statistician, using pre-determined definitions, classified them on the basis of their answers.

The 1966 and 1971 Census questions asked whether the person: (i) Had a job or business of any kind last week? (even if temporarily absent from it); (ii) Did any work at all last week for payment or profit? (Unpaid helpers who worked were to answer yes); (iii) Was temporarily laid off by his employer without pay for the whole of last week? and (iv) Looked for work last week? (Ways of 'looking for work' were specified on the census form.)

The 1966 and 1971 labour force includes all persons answering yes to any of the four questions. The unemployed consist of those answering no to questions (i), (ii) and (iii) and yes to question (iv).

The effect of the new approach from 1966 was to include additional persons in the labour force, particularly those working part-time. In 1947, 1954 and 1961, the sub-group 'unable to secure employment' was part of a larger group 'not at work' which also included those absent because of illness, accident or industrial dispute. The 1966 definition eliminates the 'not at work' category.

Labour Force Survey

This series is based on a quarterly survey of a sample of the population. The estimates relate to all persons aged 15 years and over with the exception of members of the permanent armed forces and certain diplomatic staff. 'Employed' persons includes all those who, during the survey week: (i) did any work for pay or profit, or (ii) worked 15 hours or more without pay in a family business (or farm), or (iii) had a job, business or farm but were not at work because of illness, holidays, etc. 'Unemployed' persons includes all those who, during the survey week: (i) did not have a job and were actively seeking work, or (ii) were laid off without pay for the whole week. 'Total labour force' includes all those who were classified as 'employed' or 'unemployed'.

This series includes employers; self employed persons; and employees in agriculture and private domestic service; all are excluded from the series 'Wage and salary earners in civilian employment'. Estimates are based on the results of the 1971 population census.

Wage and Salary Earners in Civilian Employment

The figures in the employment tables are based on data derived from the Population Census of June 1966 and on other later data from three main sources: (i) current payroll tax returns; (ii) current returns from government bodies; and (iii) some other direct current employment returns (e.g. for hospitals). The three current sources just specified cover most employment but a small unrecorded balance in the private sector has to be estimated.

Month-to-month changes shown by current returns are linked with the benchmark data (the June 1966 Census) to derive the monthly estimate. At June 1966, employment totals obtained from the three current sources defined above represented about 85 per cent of the total number of employees in the industries covered, as determined by the census.

The table figures relate only to civilian wage and salary earners, not to the total labour force, and therefore exclude employers, self-employed persons, unpaid helpers and members of the defence forces. Also excluded, because of inadequate current data, are employees in agriculture and in private domestic service.

Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave, or who work during part of the pay-period and are unemployed or on strike during the rest of the period, are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Payroll tax returns are lodged by all employers paying more than \$400 a week in wages (other than certain Government bodies, religious and benevolent institutions, public hospitals and similar types of organisations specifically exempted). The passing of control of payroll tax in 1971 from the Australian Government to the states did not affect the production of the wage and salary earners employment series.

Although the series measures the short-term trends in employment in the defined field reasonably well, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and payroll data, and changes in such factors as labour-turnover, multiple jobholding and part-time working all affect the trend over longer periods.

Registered Unemployed and Job Vacancies

The figures in the unemployment tables are taken directly from the Department of Labour monthly publication Monthly Review of the Employment Situation. The figures generally relate to the Friday nearest the end of the month.

'Registered unemployed' includes all persons who claimed, when registering with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. Also included are those referred to employers and those who may have obtained employment without notifying the Commonwealth Employment Service. Persons receiving unemployment benefit are necessarily included.

Registered job vacancies refer to vacancies which employers claimed were available immediately, or would be available by the end of the following calendar month.

The seasonally adjusted data in the area table have been derived by removing from the series the estimated normal seasonal variation. However, the effect of other influences has not been removed; in particular, any unusual irregular movement has not been removed. The seasonally adjusted series should not be regarded as 'definitive'; they must be treated with caution as being no more than useful indicators of movements, and as a useful aid to critical interpretation. Seasonally adjusted figures are revised annually. For more details, see 'Seasonally Adjusted Indicators 1975' (Ref. No. 1.10) issued in July 1975 by the Commonwealth Statistician,

UNIONS, AWARDS AND DISPUTES

TRADE UNIONS: INCIDENCE OF AWARDS: AND INDUSTRIAL DISPUTES

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

Trade Unions

The figures shown in this section are prepared from a special collection of membership of trade unions at 31 December each year. 'Proportion of total wage and salary earners' shows approximate percentages of wage and salary earners in employment who were members of trade unions.

Surveys of the Incidence of Industrial Awards, Determinations, and Collective Agreements

The tables contain results of surveys conducted in April 1954, May 1963, May 1968 and May 1974.

The results of the May 1974 survey are based on returns collected from:

- (i) a stratified random sample of most private employers subject to payroll tax (i.e. those paying more than \$400 a week in wages and salaries);
- (ii) all public hospitals and marketing boards;
- (iii) all Australian Government and State Government departments and semi-government authorities; and
- (iv) a stratified random sample of local government bodies.

Definitions: 'Male and female employees' refers to those who were on the payroll during the last pay period in May 1974. It includes managerial, executive and higher supervisory staff. 'Private employees' includes employees of private employers, public hospitals and marketing boards. 'Government employees' refers to employees of the Australian Government and State Government departments, semi-government authorities and local government bodies. 'Commonwealth awards' refers to awards and determinations made by, and collective agreements registered with, the Australian Conciliation and Arbitration Commission, the Public Service Arbitrator, the Coal Industry Tribunal and the Flight Crew Officers Industrial Tribunal. 'Tasmanian State awards' refers to determinations made by Wages Boards, and awards of the Public Service Tribunal. 'Employees affected by awards, etc.' refers to employees whose wages, salaries and conditions of work are normally varied in accordance with variations in an award or determination made by, or a collective agreement registered with, a federal or state industrial authority. 'Other employees' refers to employees whose wages, salaries and conditions of work are not normally varied in accordance with variations in an award or determination made by, or a collective agreement registered with, a federal or state industrial authority.

Comparability of Results: Detailed comparisons of each year are not possible because of differences in sample design, in industry classification, and in the level of sampling variability.

Industrial Disputes

Statistics relating to industrial disputes refer only to disputes of 10 man-days or more. Workers indirectly involved are those employees who, although not parties to the dispute, are thrown out of work at the establishment where the stoppage occurred.

Industrial dispute statistics are compiled from: (i) direct collections from employers and trade unions; (ii) reports of government departments and other authorities; (iii) state and federal authorities; and (iv) trade journals, trade union and employer publications and newspaper reports. Particulars of some stoppages may be estimated; therefore the statistics should be regarded as giving a broad measure of the extent of work stoppages. Disputes not settled at the end of the year are included as new disputes in the figures of the following year. A dispute involving workers in more than one industry group is counted once only in the item 'Number of disputes' and is included in the industry group with the largest number of workers involved. However, workers involved, working days lost and estimated loss in wages and salaries are allocated to their respective industries.

(a) Disputes settled in any one particular year

WAGES AND HOURS

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

October Weekly Earnings and Hours Surveys

General: The first survey of weekly earnings and hours was conducted by the Australian Bureau of Statistics in October 1962. Subsequent surveys have been conducted each year for the last pay-period in October, or where abnormal circumstances affected the last October pay-period, for the nearest normal pay-period. The survey is based on a stratified random sample representing most employers paying payroll tax (i.e. those paying more than \$400 weekly in wages and salaries). The following are excluded from the survey: (i) employees in rural industry and private domestic service; (ii) employees of religious, benevolent and similar organisations. Employees of government and semi-government authorities were included in the survey for the first time in October 1972. Waterside workers, if hired under the new permanent employment scheme, are included; however, when employed on a casual basis they are excluded. The industrial classification used for all surveys, except the 1962 and 1974 surveys, is that used for the 1961 and 1966 population censuses; for the 1974 survey the Australian Standard Industrial Classification was used. Only broad general comparisons can be made between the 1962 results and subsequent surveys. The October 1965 survey was a special purpose survey, restricted to weekly earnings of full-time adult males.

Scope of Information: In addition to obtaining data for the calculation of average weekly earnings, average weekly hours paid for, and average hourly earnings, the October 1966 to 1972 surveys obtained information on overtime and ordinary time earnings and hours for full-time employees (other than managerial, etc. staff). Figures of average overtime earnings and average overtime hours are the averages for all employees (in the specified category) represented in the survey whether or not they worked overtime. The survey figures do not show the average overtime earnings or hours of only those employees who worked overtime. Average weekly earnings, hours paid for and average hourly earnings are shown for adult and junior males and females.

Comparability of Results: The following are the main factors affecting comparability of survey results: (i) allocation of employees between 'managerial, executive, professional and higher supervisory staff' and 'all other full-time employees' depends upon the employers' interpretation of the definitions; (ii) in the 1962, 1963 and 1964 surveys employees whose hours of work were not known were reported in managerial, etc. but in the 1966, 1967 and 1968 surveys employers were asked to report these employees in their correct classification; (iii) sampling variability; (iv) the different industrial classification used for the 1962 survey; and (v) inclusion of employees in non-government hospitals not subject to payroll tax and of government and semi-government authority employees (previously excluded) from 1972. For results of surveys prior to October 1972 see earlier issues of this bulletin.

- Definitions:**
- (i) Employees: male and female employees who worked for the last pay-period in October.
 - (ii) Adults: all employees 21 years of age and over and employees under 21 receiving the adult rate for their occupations.
 - (iii) Juniors: employees under 21 not paid at the adult rate for their occupation.
 - (iv) Full-time employees: those employees who normally work 30 hours or more a week and received pay in the last pay-period in October.
 - (v) Part-time employees: those employees who normally work less than 30 hours a week and received pay in the last pay-period in October.
 - (vi) Other than managerial, etc. staff: comprises minor supervisory employees, leading hands, clerical and office staff and ordinary wage employees. It excludes 'managerial, etc. staff' who were not further defined.
 - (vii) Weekly earnings: gross earnings, before taxation and other deductions have been made, for the last pay-period in October. Includes overtime earnings, shift allowances, penalty rates, commission and similar payments and that part of sick, annual or long service leave taken during the specified pay-period. Includes one week's proportion of payments made on other than a weekly basis. Retrospective payments are excluded.
 - (viii) Overtime earnings: that part of gross weekly earnings for hours paid for in excess of award, standard, or agreed hours of work.
 - (ix) Ordinary time earnings: that part of gross weekly earnings paid for award, standard or agreed hours of work. Includes shift allowances, penalty rates, commissions, bonuses, incentive payments and that part of paid annual or other leave relating to these hours.
 - (x) Weekly man-hours paid for: sum of man-hours for which payment was made. Includes ordinary time hours, overtime hours, paid standby or reporting time and that part of paid annual, sick or long service leave and paid holidays taken during the specified week.
 - (xi) Overtime hours: hours in excess of award, standard or agreed hours of work.
 - (xii) Ordinary time hours: award, standard or agreed hours of work. Includes man-hours of standby or reporting time which are part of standard hours of work and that part of paid annual, sick and long service leave taken during the specified week.

May Survey of Weekly Earnings, 1971

Results of this survey may be found in: (i) the Tasmanian Office publication 'Labour, Wages and Prices, 1973-74'; or (ii) the Central Office release 'Survey of Weekly Earnings (Size Distribution), May 1971', reference number 6.30.

Average Weekly Earnings per Employed Male Unit

The figures relate to civilians only. They are derived from particulars of employment and wages and salaries recorded on payroll tax returns, from other direct collections and from estimates of the unrecorded balance. Particulars of wages and salaries for males and females separately are not available from payroll tax returns. Average weekly earnings are calculated in terms of 'male units', that is for calculating the Tasmanian average the divisor is male employees plus a percentage of female employees which varies during each year. At the end of the June quarter 1975 it was 64 per cent. This proportion was derived from the estimated ratio of female to male earnings in Tasmania. Quarterly figures are subject to seasonal influences; special payments, bonuses and prepayment for holidays

LABOUR, WAGES AND PRICES, 1974-75

tend to raise December quarter figures and depress March quarter figures.

These figures are not comparable with those derived from the annual October Survey of Weekly Earnings and Hours (see preceding section 'Weekly Earnings and Hours'). Average weekly earnings per employed male unit are estimates of the actual average weekly earnings of all wage earners and salaried employees.

Weekly and Hourly Wage Rates

Wage rates used to compile the index are the minimum rates prescribed for particular occupations in federal or state awards and in registered (and in some cases unregistered) agreements. For some occupations, general loadings are included; however, loadings not applicable to all workers in a specified award occupation are excluded from the wage rates. The rates are normally referred to as 'weighted average minimum weekly rates'.

The minimum wage rates used in compilation of the indexes are for representative occupations within each industry. They are derived from representative awards, determinations and agreements in force at the end of each period.

Indexes are based on the occupational structure existing in 1954. The appropriate weights were derived from sample surveys made in that year. Occupations in new or expanding industries are normally covered by existing awards. However, when a new award is made to cover a new industry this award is incorporated into the index if the number of employees warrants such action. The occupations included in the indexes are therefore representative of the current situation and are comparable over a long period.

The amounts should not be regarded as actual current averages but as indexes expressed in money and hour terms, indicative of trends. The amounts do not measure the relative level of wage rates or hours as between states.

Invalid Comparison: The 'weighted average minimum weekly wage rates' are not comparable with 'average weekly earnings per employed male unit'. For an explanation of the latter concept see the previous section.

Federal Awards, etc.: Includes awards of, or agreements registered with, the Australian Conciliation and Arbitration Commission and determinations of the Australian Public Service Arbitrator.

State Awards, etc.: Includes awards or determinations of, or agreements registered with, the Tasmanian Wages Boards and the Tasmanian Public Service Board.

Basic Wages

The concept of a 'basic' or 'living' wage was common to wage rates determined by industrial authorities in Australia before an award of the Australian Conciliation and Arbitration Commission in June 1967 introduced the 'total wage' concept. (Tasmanian State Wages Boards, however, have retained the basic wage in their determinations.)

Total Wages

The June 1967 decision handed down by the Australian Conciliation and Arbitration Commission abolished the concept of the basic wage in federal awards. The basic wage and margins were replaced by a 'total wage' which became operative from the first pay-period commencing on or after 1 July 1967. The 'minimum wage' concept (see following section) introduced by the Commission in July 1966 was retained.

Minimum Wages

In its July 1966 decision, the Commission ordered that the 'minimum wage' paid under the Metal Trades Award should include a margin of \$3.75 above the appropriate basic wage. The minimum wage was expressed as a total wage. In July 1967 Tasmanian Wages Boards adopted a similar concept.

Minimum Rates of Wages and Prescribed Hours of Work for Specified Occupations

These have been taken from awards, determinations and agreements of industrial tribunals and from unregistered agreements operative at 31 December. The wage rates and hours are generally those applicable to the capital cities, but where this is not so the area of the state to which they apply is indicated in a footnote. Where two or more rates are quoted in an award, determination or agreement for a particular occupation, only the lower (or lowest) rate for each occupation has been quoted. In the majority of cases, the rates quoted are those payable for a full week's work (excluding overtime). Where it is not possible to quote such rates, hourly rates have been shown. For most occupations the hours constituting a full week's work (excluding overtime) are 40; where the hours prescribed differ from 40 they are shown in the footnotes to the table.

LABOUR, WAGES AND PRICES, 1974-75

TABLE 27. STATE BASIC WAGE RATES: HOBART (a)

(£)

Date operative (b)	Adult males	Adult females	Date operative (b)	Adult males	Adult females
1956 May	26.80	20.10	1969 19 December	36.80	28.20
August (c)	27.20	20.40	1971 1 January	39.00	29.90
1959 June (d)	28.20	21.15	1972 19 May	41.00	31.90
1961 July (d)	29.40	22.05	1973 29 May	43.50	34.40
1964 19 June (d)	31.40	23.55	1974 23 May	46.00	36.90
1966 11 July (d)	33.40	25.05	1975 15 May	47.70	38.20
1967 July (e)	34.40	26.05	1975 18 September	50.00	40.50
1968 25 October	35.75	27.40			

- (a) Prior to February 1956 most Tasmanian Wages Boards adopted federal basic wage rates.
 (b) Rates are operative from the beginning of the first pay-period commencing in the month shown or commencing on or after the date shown.
 (c) Rate declared subsequent to an inquiry.
 (d) Most Tasmanian Wages Boards adopted federal basic wage rates from the month or date shown.
 (e) State Wages Boards retained the basic wage concept after basic wages and margins were eliminated from federal awards.

TABLE 28. FEDERAL TOTAL WAGE: INCREASES IN WEEKLY WAGE RATES (a)

Date operative (b)	Adult males and females	Date operative (b)	Adult males and females
1967, 1 July	\$1.00	1973, 29 May	2 per cent plus \$2.50
1968, 25 October	\$1.35	1974, 23 May	2 per cent plus \$2.50
1969, 19 December	3 per cent	1975, 15 May	3.6 per cent
1971, 1 January	6 per cent	1975, 18 September	3.5 per cent
1972, 19 May	\$2.00		

- (a) The 1 July 1967 decision of the Australian Conciliation and Arbitration Commission introduced the total wage concept and eliminated the basic wage and margins from its awards; the last federal basic wage award was on 11 July 1966 - \$33.40 for adult males and \$25.05 for adult females.
 (b) Rates are operative from the beginning of the first pay-period commencing on or after the date shown.

TABLE 29. MINIMUM WAGE, ADULT MALES, WEEKLY RATES: FEDERAL AND TASMANIAN AWARDS

(£)

Federal awards: Hobart		State Wages Boards' determinations	
Date operative (a)	Amount	Date operative (a)	Amount
1968 25 October	39.50	1968 25 October	40.45
1969 19 December	43.00	1969 19 December	43.00
1971 1 January	47.00	1971 1 January	47.00
1972 19 May	51.70	1972 19 May	51.70
1973 29 May	60.70	1973 29 May	60.70
1974 23 May	68.70	1974 23 May	68.70
1975 1 January	76.70	1975 1 January	76.70
1975 15 May	80.70	1975 15 May	80.70
1975 18 September	83.50	1975 18 September	83.50

- (a) Rates are operative from the beginning of the first pay-period commencing on or after the date shown.

NOTE: Minimum wage adult females: In the 1974 National Wage Case decision the Australian Conciliation and Arbitration Commission extended the minimum wage award provisions to adult females. The extension was made in three steps: (i) From the beginning of the first pay-period commencing on or after 23 May 1974 85 per cent of the adult male minimum wage; (ii) from the beginning of the pay-period in which 30 September 1974 occurs 90 per cent; and (iii) 100 per cent from the beginning of the pay-period in which 30 June 1975 occurs.

Hairdressing	Hairdresser (men's)	66.50	82.20	109.40	
	Barman	57.60	71.50	98.70	
Hotels (n)	Cook - First	59.00	89.80	116.50	
	All others	57.10	71.90	98.10	
Restaurants (n) -	Porter (day)	54.20	67.00	93.10	
	Waiter	55.50	68.30	94.50	
	Cook (one only employed)	59.00	71.70	93.00	
	Pantryman	53.00	65.60	86.80	
	Watchmen, cleaners, etc. -	Lift attendant	56.90	60.70	103.20
	Office cleaner (day)	56.90	60.70	103.20	

- (a) Unless otherwise specified rates are for a 40-hour week. Where two or more awards exist for a single occupation the lowest rate is shown.
- (b) Rates and hours applicable throughout the State.
- (c) 44 hours.
- (d) Without keep.
- (e) Shearers' hours are 40 a week; shed hands' hours are the same as those for shearers, with such additional time as may be necessary to finish picking up fleeces, etc. Should the additional time engaged picking up, etc. exceed 30 minutes a day, all time thereafter is paid as overtime. Rates shown are 'not found' rates. Found rates were \$22.77 a week less in December 1974, \$17.26 a week less in December 1973, \$13.11 a week less in December 1972.
- (f) Silver-lead-zinc mining.
- (g) Day work rates. Night work rates (for 38-hour week) were \$9.00 higher in December 1972, 1973 and 1974 than day work rates.
- (h) The rates are weekly equivalent of hourly rates. They include allowances for excess fares and travelling time, sick leave, statutory holidays, following the job, etc.
- (i) Weekly rates prescribed for a full week's work (excluding overtime).
- (j) 78 hours a fortnight.
- (k) Government operated services only.
- (l) Rates of pay are for casuals on other than special cargo work.
- (m) Local or city.
- (n) Rates of wage represent the weekly cash payment where board and lodging are not provided.

Theatres				

(a) Unless otherwise specified rates are for a 40-hour week.

(b) 36½ hours.

(c) 36 hours.

(d) Rates of wage represent the weekly cash payment where board and lodging are not provided.

PRICES AND PRICE INDEXES

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

Consumer Price Index

The Consumer Price Index is a quarterly measure of variations in retail prices for goods and services representing a high proportion of the expenditure of wage-earner households. The weighting pattern relates to estimated aggregates of wage-earner household expenditures, and not to estimated expenditure of an average or individual household of a specified type or mode of living. Consumer (or retail) price indexes are sometimes loosely called 'cost of living indexes' and are thought to measure changes in the cost of living. Such indexes cannot measure mode or level of living. Changes of this kind are matters for consideration apart from price indexes. Changes in prices of goods and services are, however, an important part of the change in cost of living and this part is measured by consumer (or retail) price indexes.

The Consumer Price Index covers a wide range of commodities and services arranged in five major groups:

- (i) food;
- (ii) clothing and drapery;
- (iii) housing;
- (iv) household supplies and equipment; and
- (v) miscellaneous.

These groups do not include every item of household spending. Prices are collected regularly for specified quantities and qualities of a large and representative selection of commodities and services.

Substantial changes have occurred in consumer usage and patterns of expenditure since 1950. In order to keep the weighting pattern representative of current expenditure, it has been necessary to construct indexes with additional items and changes in the weighting pattern at intervals, rather than to maintain an index based on a list of items and set of weights that remained unchanged throughout the whole period covered.

For the six state capital cities, eight series for short periods (i.e. (i) from September quarter 1948 to June quarter 1952; (ii) from June quarter 1952 to June quarter 1956; (iii) from June quarter 1956 to March quarter 1960; (iv) from March quarter 1960 to December quarter 1963; (v) from December quarter 1963 to December quarter 1968; (vi) from December quarter 1968 to December quarter 1973; (vii) from December quarter 1973 to June quarter 1974; and (viii) from September quarter 1974) have been constructed and linked to form a continuous retail price index series.

During each period between links, the items and weighting pattern remain unchanged. At each time of linking, the weighting pattern is altered and new items (mainly ones that have become significant in household expenditure) are introduced. The process of linking ensures that the index reflects only price variations and not differences in cost of the old and new lists of items. The introduction of new items and weights by linking does not, of itself, raise or lower the level of the index.

The weighting of the seventh linked index was derived from analyses of data from the Population Census of 1971, the 1968-69 Census of Retail Establishments, the 1971 Motor Vehicle Usage Survey, from recent statistics and estimates of production, consumption, etc., and from several special purpose sample surveys. The eighth series differs only in the deletion of the item 'radio and television licences' as from September 1974.

A detailed description of the Consumer Price Index, including the weighting pattern, is contained in the Labour Report No. 58, 1973.

Wholesale Price Indexes

Materials Used in Building other than House Building: This index measures changes in prices of selected materials used in the construction of buildings other than houses and 'low-rise' flats (in general, those up to three storeys). It includes 72 items, combined in eleven groups, in addition to an 'All Groups' index. Although the selected materials (or many of them) are also used in house (and low-rise flat) building, in building repair, maintenance and alteration work, and in 'engineering construction' work (e.g. projects such as roads, dams, bridges and the like) the weighting pattern of the index, being designed for the specific purpose mentioned at the beginning of this paragraph, is not applicable to these other activities of the construction industry. In addition, since the weights are based on an average materials usage over a range of types of building within the defined area (building other than house building), the index is not necessarily applicable to any specific building or type of building or type of building included in that area. The index is a fixed-weights index and is calculated by the method known as 'the weighted arithmetic mean of price relatives'. The items and weights were derived from reported values of materials used in selected representative buildings constructed in or about 1966-67. The single weighting pattern relates to the whole of Australia, and is applied (with minor exceptions) in calculating indexes for each State capital city. Prices are collected as at the mid-point of the month to which the index refers, or as near thereto as practicable. They relate to specified standards of each commodity and are obtained in Hobart from representative suppliers of materials used in building. There are, however, some exceptions to the use of local prices; the whole of the group 'Electrical installation materials' and the majority of the items in the group 'Mechanical services components' are based on Sydney and Melbourne price series.

Materials Used in House Building: This index is calculated by the same method and is complementary to the 'Other than House Building Index'. It measures the changes in prices of selected materials used in house construction. The house construction types included are those which use brick, brick veneer, timber or asbestos cement sheeting as the principal material of the outer walls. The number of items included in the index ranges from 49 (Brisbane) to 51 (Perth). The items are combined into eleven groups. An 'All Groups' index is also published. Standards are fixed for items and prices are obtained for items of constant quality. Information about material usage and values was obtained for houses in each State capital city urban area. From the data collected, weighting patterns were developed for each capital city and for a combined six State capital cities index. Prices are collected at the mid-point of each month from representative suppliers in each capital city. The index has been compiled for each month from July 1966 and for financial years from 1966-67. Index numbers are published for each capital city and for the six State capital cities combined (though details for Hobart only are shown in this Bulletin); although the base of the index is 1966-67 = 100.0, the weighting pattern more closely approximates material usage in 1968-69.

LABOUR, WAGES AND PRICES, 1974-75

Price Indexes of Metallic Materials: The 'Price Index of Metallic Materials used in the Manufacture of Fabricated Metal Products' and the 'Price Indexes of Copper Materials used in the Manufacture of Electrical Equipment' have been compiled monthly from July 1968 and for financial years from 1968-69. Each of the index is a fixed weights index with base 1968-69 = 100.0 and compiled using the method known as the weighted arithmetic mean of price relatives. Prices for all of the items relate to representative goods of fixed specification collected from a selection of representative sources. The prices are collected monthly and are for items of constant quality. The prices, as far as possible, are those normally charged to representative manufacturers for goods delivered into their stores. The 'Price Index of Metallic Materials Used in the Manufacture of Fabricated Metal Products' includes important metallic materials selected and combined in accordance with a weighting pattern reflecting value usage as reported in the 1968-69 Census of Manufacturing Establishments for establishments classified to the ASIC sub-division of 'Fabricated Metal Products'. 'Price Indexes of Copper Materials Used in the Manufacture of Electrical Equipment' have a weighting pattern based on advice from the Electricity Supply Association of Australia and the Australian Electrical Manufacturers' Association.

Price Index of Materials Used in Manufacturing Industry: This index has been compiled for each month from July 1968 and for financial years from 1968-69 on the reference base year 1968-69. Index numbers for financial years are simple averages of the relevant monthly index numbers. The index is a fixed weights index and is calculated by the method known as the weighted arithmetic mean of price relatives and is based on materials used by establishments classified to Division C, Manufacturing, of ASIC. Only materials originating from outside the Manufacturing Division were selected. The selected items have been combined into broad 'index groups' using two different classifications:

- (i) Australian Standard Industrial Classification (ASIC)
- (ii) Standard International Trade Classification (SITC)

The index is on a 'net basis' relating in concept only to those materials which are used by establishments within the Manufacturing Division in Australia and which have been produced by establishments outside that Division. Prices are collected using mainly monthly average prices rather than prices relating to the mid-point of the month. Prices of home-produced items are generally obtained from principal users while prices of imported items are obtained from suppliers and users. As far as possible prices are on a 'delivered into store' basis relating to goods of fixed specifications with the aim of incorporating in the index price changes for representative materials of constant quality.

Export Price Index

The purpose of the Export Price Index is to provide monthly comparisons over a limited number of years of the level of export prices of selected items, making no allowance for variation in quantities exported. The price series used in the index relate to specified standards for each commodity and in most cases are combinations of prices for a number of representative grades, types, etc. As nearly as possible, prices used are f.o.b. at the main Australian ports of export. There are 29 items in the index, with weights originally based on average annual values of exports during the five years 1956-57 to 1960-61. During that period these items constituted 83 per cent of the total value of Australian exports. In recent years this proportion has decreased, and in 1966-67 and 1967-68 was less than 75 per cent of the total. From July 1969 the index has been linked with an interim series prior to complete revision and rebasing. The interim series has 33 items constituting 74 per cent of the total value of Australian exports (merchandise and non-merchandise) in 1969-70. Separate details of Tasmanian export prices are not available.

Agricultural Production Price Index

Indexes of Unit Value of Agricultural Production: The unit value indexes of crops (including pastures), livestock slaughterings and livestock products measure changes in unit gross values of the products. The 'unit value index of agricultural output' measures changes in unit gross values of products sold outside the agricultural sector. Unit gross values used for each product in each group index are obtained by dividing the gross value of the product realised at the principal market by the quantity produced or marketed. In the agricultural output index exclusion of production of seed and fodder crops retained within the farm sector may alter the unit values and weights slightly but otherwise the unit values are the same. The indexes are calculated by the fixed weights aggregative method. The weights used are the average quantities of the relevant products produced or marketed in the three years ended 1970-71. The indexes are not price indexes in the generally accepted sense as they not only measure the effects of price changes but also reflect effects of variations in the quality and composition of the products.

PRICES AND PRICE INDEXES

(a) Figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid distortions that would occur in rounding the figures to the nearest whole number.

LABOUR, WAGES AND PRICES, 1974-75

TABLE 33. CONSUMER PRICE INDEX: COMPOSITION AND WEIGHTING PATTERN AT DECEMBER
QUARTER 1973 FOR THE SIX STATE CAPITAL CITIES COMBINED (a)

Group, section, etc.	Percentage weight	
	Section, etc.	Group
Food -		
Cereal products	3.0	28.3
Dairy produce	4.6	
Potatoes, onions, preserved fruit and vegetables	2.7	
Soft drink, ice cream and confectionery	4.0	
Meat -		
Butcher's	7.7	
Processed, including poultry	3.0	
Snacks, take away food	0.9	
Other food	2.4	
Clothing and Drapery -		
Men's clothing	3.2	12.1
Women's clothing	4.0	
Boy's clothing	0.5	
Girl's clothing	0.4	
Piecegoods, etc.	0.8	
Footwear	2.3	
Household drapery	0.9	
Housing -		
Rent -		
Privately owned houses	2.8	14.4
Privately owned flats	3.4	
Government owned houses	0.6	
Home Ownership -		
House price	3.6	
Rates	2.3	11.3
Repairs and maintenance	1.7	
Household Supplies and Equipment -		
Fuel and light -		
Electricity	1.9	
Gas	0.7	
Other (firewood, heating oil, briquettes and kerosene)	0.3	
Household appliances	2.2	
Furniture and floor coverings	2.0	
Household utensils	0.7	
Household sundries and stationery	1.2	
Personal requisites	1.3	33.9
Proprietary medicines	1.0	
Miscellaneous -		
Fares -		
Train	0.7	
Bus and tram	1.0	
Private motoring -		
Car purchase	4.4	
Car operation	8.6	
Cigarettes and tobacco	3.6	
Beer	4.5	
Wine and spirits	1.2	100.0
Postal and telephone services	1.3	
Recreational goods and services	2.0	
Newspaper and magazines	1.1	
Health services	4.0	
Other services (hairdressing, dry cleaning, shoe repairs)	1.5	
All groups	100.0	100.0

(a) Percentage contributions shown are in proportion to estimated pattern of consumption at or about 1971-72 valued at relevant prices of December quarter 1973. A further change in the composition and weighting pattern was made from the September quarter 1974. The change was only minor, involving the deletion of the item 'radio and television licences' from the 'miscellaneous' group.

TABLE 34. ANNUAL AVERAGE RETAIL PRICES OF SELECTED FOOD AND GROCERY ITEMS: HOBART (a)

November	142.8	142.4	136.2	128.3	151.3	176.6	142.9	-0.1
December	144.9	144.2	138.2	130.4	150.2	180.0	144.7	1.3
January	147.4	151.3	139.3	128.2	149.4	183.1	144.5	-0.1
February	149.3	156.4	139.6	126.4	149.4	184.6	144.3	-0.1
March	149.9	162.0	142.3	128.6	150.5	183.6	145.8	1.0
April	153.1	164.7	143.5	131.5	148.6	186.0	147.6	1.2
May	152.8	167.1	144.2	130.1	147.8	185.8	146.8	-0.5
June	152.5	167.5	145.0	128.6	143.7	186.3	145.4	-1.0

(a) Relates only to materials which are used in Australian manufacturing industry and which have been produced outside Australian manufacturing industry.

(b) Figures are shown to one decimal place to avoid distortions that would occur in rounding the index numbers to the nearest whole number.

(c) Excluding the manufactured imported crude materials listed in Footnote (d).

(d) Includes the following manufactured imported crude materials: Synthetic rubber, hardwood, softwood, woodpulp, synthetic fibre, vegetable oils, and imported fuel oil.

(a) Comprises coal, iron and steel, copper, zinc, lead and silver. Excludes iron-ore, bauxite, alumina and mineral sands.

(b) Interim series linked at 30 June 1969; see explanatory notes at beginning of this section.

(c) Includes, in addition to the specified groups, iron ore, bauxite, alumina and mineral sands.

(d) Nominal.

TABLE 43. INDEXES OF UNIT GROSS VALUE OF AGRICULTURAL PRODUCTION AND OUTPUT, AUSTRALIA (a)

(Base of each index: Year 1968-69 = 100.0)

Particulars	1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72	1972-73	1973-74

(a) Component unit gross values are weighted together using average quantities for the three years ended 1970-71.

(b) Sugar cane cut for crushing and planting.

(c) Includes dairy cattle slaughtered.

(d) Component series based on value per unit of carcase weight.

(e) Includes honey and beeswax.

(f) Excludes seed, feed and fodder consumed or retained on farms.
